Application/Control Number: 10/650,113

Art Unit: 3744

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by Kattis. Kattis discloses an ice maker that uses an automatic expansion valve to control of the flow of refrigerant to the evaporator (see col. 6, lines 26-47). An automatic expansion valve maintains the pressure in the evaporator constant and therefor the temperature of the refrigerant in the evaporator is controlled to a constant set temperature corresponding to the saturation temperature of the pressure setting of the automatic expansion valve.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 4-22 and 25-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kattis as applied to claim 1 above, and further in view of admitted prior art. It is taken to be admitted prior art that the various means for controlling the compressor capacity recited in the claims are conventional in view of the lack of any disclosure of how to make and use said capacity control means. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have

modified the system of Hanson such that it included the use such alternative means for controlling compressor capacity.

Claims 23-24 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kattis as applied to claim 1 above, and further in view of Trepaud. Trepaud teaches controlling the position of water introduction conduits across the evaporator surface in order to produce ice. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the system of Kattis such it included controlling the position of water introduction conduits across the evaporator surface in view of the teachings of Trepaud.

Applicant's arguments with respect to the claims have been considered but are most in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3744

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Harry B. Tanner whose telephone number is (571) 272-4813. The examiner can normally be reached 8:30 am to 5:00 pm Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler, can be reached on (571) 272-4834. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://portal.uspto.gov/external/portal/pair. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
